

Recover Lost Revenue

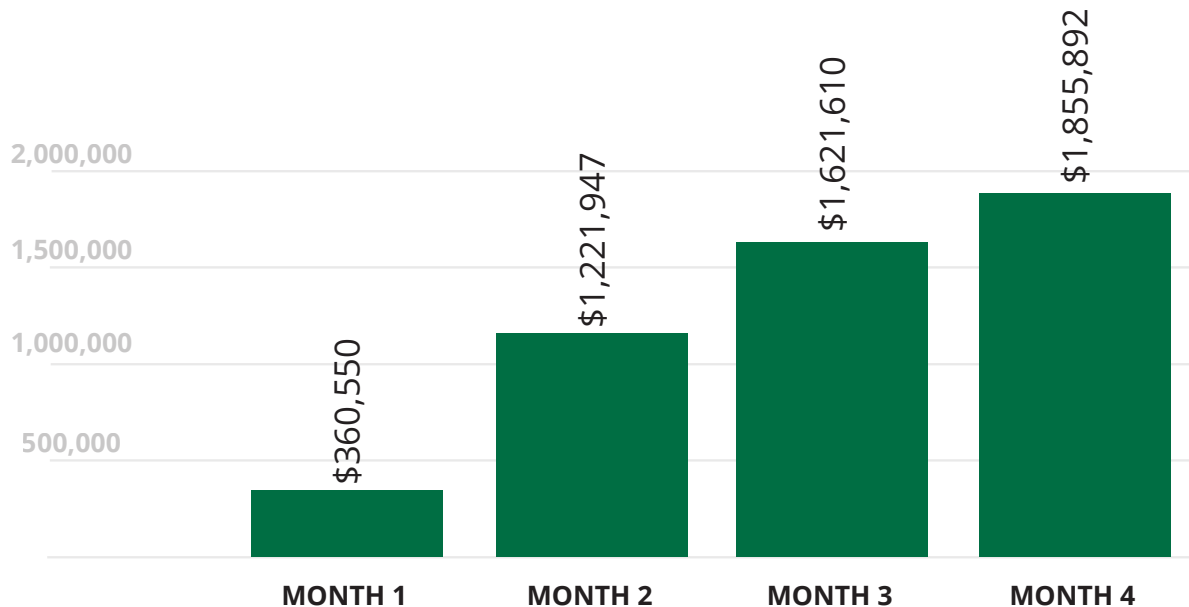

Recovering Revenue From Claims Prior To An EMR Conversion

ERISA Recovery helped our hospital client claim up old, written-off claims pre-system conversion to recover revenue that could have been lost forever.

Our client was onboarded with minimal reporting necessary due to our proprietary system initiatives. Their system went through the transition to a new EMR and finally provided a data dump on claims aging from 1-4 years old.

Results came immediately with the data and they have continued to receive consistent income from recovered data from dead claims for the last 10 months.

Hospital environments can be very volatile and EMR upgrades/ transitions are very stressful on Hospital personnel. **Allow ERISA Recovery to help make sure no revenue is discarded or overlooked.**

Case Study
